REFLECTIVE BALLS

The principle of sphere reflection: the outer skin of the sphere is a reflective material. When the sphere is irradiated by natural light, sunlight, etc., the light irradiates on the surface of the sphere and the ball reflects diffusely. It must be illuminated by a light source to reflect light.

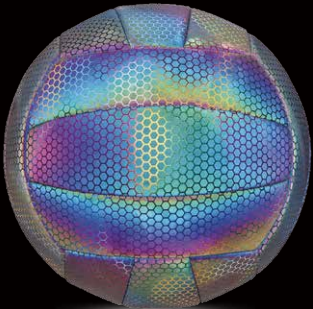

球体反光原理：球体的外皮是反光材料。当球体受到自然光、太阳光等照射时，光线照射在球体表面，球体发生漫反射。它必须被光源照射才能反射光线。

GLOWING SOCCERBALL

After the sphere is irradiated by natural light, sunlight, ultraviolet light, etc., the surface of the sphere stores light energy and slowly releases fluorescence at night or in the dark. The fluorescence lasts for several hours to more than ten hours; and it can be recycled for life, and the material is solid and durable.

球体受到自然光、太阳光、紫外线等照射后，球体表面储存光能，在夜间或黑暗中缓慢释放荧光。荧光持续数小时至十几小时；并且可以循环使用，材质坚固耐用。
